## A New Generation of Commercial Laundry Services for a Fourth Generation Mainstay

John Martin, president of Martin Carpet Cleaning, combines a tradition of old-world rug cleaning techniques he learned from his grandparents with modern-day technology that has made this company a true institution in Columbus, Ohio.

Now with the addition of John's two sons, Martin Carpet Cleaning has expanded its services from cleaning area rugs to commercial laundry services for large uniform companies using the latest advancements. "But we're still a customer- and quality-oriented company that prides itself on delivering personal and responsive services," John Martin says. His customers couldn't agree more.

While the company relied for years on a 1,750,000 Btu boiler to produce the hot water required to clean heavily soiled items, John finally determined that

the boiler couldn't deliver water that was consistently hot in the quantities the company needed. "In our business, hot water and the right temperature of that water for a particular application is paramount," John says. In addition, the boiler sent a lot of heat up the flue that was totally wasted. "With the uncertainty of natural gas costs, it was time to replace our old unit with something that would maximize the Btus of the gas being used," John says. That's when John was referred to QuikWater direct-contact water heating systems.

QuikWater recommended its Flagship model 1750 with the capability to produce 43 gallons of 130° water per minute. This direct-contact hot water heating system met every criteria for Martin Carpet Cleaning: hot water at consistent temperatures; high energy

efficiency; fast water delivery time; low maintenance; and exceptional after-the-sale service. "Now we rely on our QuikWater system to feed our commercial heater with preheated water at 115° to 120°, so the commercial heater can increase the temperature to 160° without straining," John says.

So, how would John Martin rate his QuikWater system overall? "In a word, *excellent*," John says. "When there's a call for hot water, it's there in volumes and saves time in that we can fill a washer or a tank in the fraction of time it used to take."

# Hot Water On-Demand All Year Long

The carpet cleaning and commercial laundry industries don't have time to wait for hot water. That's why QuikWater direct-contact water heating systems deliver continuous pure, potable, hot water with 99% energy efficiency, helping you increase production, avoid downtime, and operate more efficiently than ever. No more boiler engineers. No more boiler permits. No more excuses.

**HOT**

**CLEAN**

**GREEN**

- On-demand hot water up to 200°F
- From 10 gpm to 2300 gpm
- Smart, simple, safe technology
- Non-pressurized design
- More efficient than traditional boilers
- More consistent hot-water temperatures than traditional boilers
- Designed for continuous direct use or with an existing external tank
- Runs on natural gas, propane or No. 2 fuel oil
- Flexible, portable designs
- Low maintenance
- Highest quality stainless steel construction for extra long life
